

PINTA WALL PANELS (PP)

G&S Acoustics' Pinta Panels (PP) are painted, sound-absorbing wall panels that add a new dynamic to interior sound absorption and design. Our panels are **painted** with your choice of colors to **match** or **contrast** with other painted finishes in your room.

Pinta Panels have a compound core of 6-7 pcf fiberglass with a paintable scrim fiber facing sheet. The fiberglass core absorbs sound; and the scrim fiber sheet allows for an evenly painted finish.

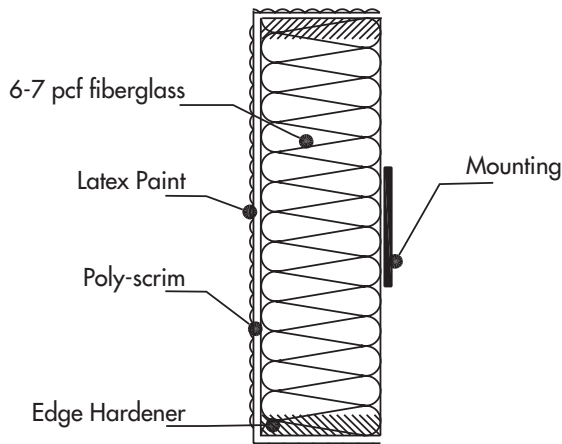

Our Pinta Panels are painted on the face and edges for a completely finished appearance. In addition to decoration, Pinta Panels provide **outstanding sound absorption**.

Pinta Panels are ideal for installations in churches, lobbies and auditoriums where the acoustical panels must blend with the background colors. These panels should be installed high on the wall and out of reach.

Other products available with a painted Pinta finish:

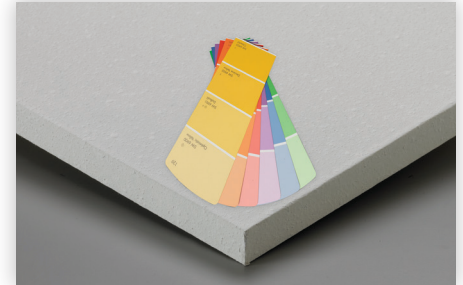

Pinta Ceiling Panels
Serenade Pinta Clouds
SoundWave Pinta Clouds
