

aCapella SlatWorks (SWW)

Wall Panels

aCapella SlatWorks wall panels offer linear design and environmental consciousness to serve design and acoustical needs. Made from recycled PET polyester, these panels create the depth and patterns of slotted walls. When accompanied by one of our wood pattern finishes, SlatWorks mimics real wood slat walls at a lower cost. These panels are delivered with a solid Backing that provides depth, a visual barrier, and enhanced acoustical performance.

Easy to install, trim, and lighter than real wood, SlatWorks provides a durable, lightweight option for interior design— with the benefits of acoustical control. The linear patterns of SlatWorks are customizable and can be changed by altering the width of each Slat. The Slats and the Backing piece are available in all aCapella colors. Additionally, Slats are available in any of our wood inspired finishes from our Woodwinds Collection

aCapella SlatWorks wall panels create linear patterns on interior walls. These patterns are adjustable by changing the width of each Slat. The pattern options below show four different Slat widths. Custom patterns using various Slat widths on a single Backing sheet are available.
